0 – Summary Expand all tables as necessary

<i>Main Achievements</i>
<ul style="list-style-type: none">• The new signs motion-captured in October now been integrated into TESSA so that we now have a system that has an improved avatar with a set of corrected and updated signs• Design has begun on a language model that will be suitable for integration into the IBM speech recogniser package to enable recognition of the kind of phrases spoken by PO clerks. UEA has requested responses from PO clerks about the way in which they phrase questions and comments during a transaction. We expect to receive about 2500 phrases from this request.
Progress towards implementing the Description of Work
<ul style="list-style-type: none">• Again, a major part of work this month has been concerned with hand-processing the new avatar signs in order to make them stable and blend well. This has proved to have been much more troublesome than was first thought because of problems with the recording process.
Highlights/Participated Problems for next period
<ul style="list-style-type: none">• A prototype unconstrained speech input system (no mapping to signs at this stage) should be developed

1 – Issues

1.1 Objectives

Objectives	<i>Progress towards achieving objectives</i>
<ul style="list-style-type: none">• An unconstrained speech input system	<ul style="list-style-type: none">• Three speech recognition packages have now been assessed for suitability for this task and the most appropriate chosen• An appropriate language model is being researched for the system by requesting responses from PO clerks about the way in which they phrase questions and comments during a transaction• Planning for a prototype speech input system is now in progress• Recent papers on techniques for mapping from spoken fragments to “routes” studied.
